Degree: B.E - CSE

## 2024_28_III_OOPS Using Java Lab

## 2028_REC_OOPS using Java_Week 9_Q1

Attempt : 1
Total Mark : 10
Marks Obtained : 10

## Section 1 : Coding

1. Problem Statement

Bobby is tasked with processing a sequence of numbers from a monitoring system. He needs to extract a strictly increasing subsequence using an ArrayList. The program should dynamically add numbers to the ArrayList only if they are greater than the last number currently stored in the list. Bobby aims to efficiently utilize the dynamic resizing and indexing features of the ArrayList to solve this problem.

Help Bobby implement this solution.

### *Input Format*

The first line of input consists of an integer N, representing the number of elements.

The second line consists of N space-separated integers, representing the elements.

**Output Format**

The output prints the list of integers in increasing sequence, ignoring out-of-order elements.

Refer to the sample output for the formatting specifications.

**Sample Test Case**

Input: 7
3 5 9 1 11 7 13
Output: [3, 5, 9, 11, 13]

**Answer**

```java
import java.util.*;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        int N = sc.nextInt();
        ArrayList<Integer> increasingList = new ArrayList<>();

        for (int i = 0; i < N; i++) {
            int num = sc.nextInt();
            if (increasingList.isEmpty() || num >
increasingList.get(increasingList.size() - 1)) {
                increasingList.add(num);
            }
        }

        System.out.print(increasingList);
        sc.close();
    }
}
```

**Status :** Correct                                              **Marks : 10/10**
